

TEST YOUR MEMORY

Game in Java Script Language

How to Play the Game?

The objective of the game Simon says is to see if you have short or long term memory. Which means you either forget a lot of things or your really good at remembering things. The student will understand and follow simple, concrete commands with visual prompts. You begin with simple instructions, such as you press play and it starts with different patterns of colors and you have to remember what colors it was played and you try to get through as much as you can. If you fail just start over and keep trying.
